

The New York State Department of Health (NYSDOH) collects, compiles, and analyzes information on influenza activity year-round in New York State (NYS) and produces this weekly report during the influenza season (October through the following May).<sup>1</sup>

## During the week ending May 11, 2024

- Influenza activity was categorized as geographically regional<sup>2</sup>. This is the 3<sup>rd</sup> nonconsecutive week of regional activity after 24 consecutive weeks of widespread activity reported this season.
- Laboratories tested 17,940 specimens for influenza, of which 1,957 (11%)<sup>3</sup> were positive, a 38% decrease in positive cases compared with the previous week.
- The number of patients hospitalized with laboratory-confirmed influenza was 102, a 44% decrease in hospitalized cases compared with the previous week.
- Of the 3,909 specimens submitted to WHO/NREVSS laboratories, 140 (4%) were positive. 89 were positive for influenza A and 51 for influenza B.
- The percent of patient visits for influenza-like illness (ILI<sup>4</sup>) from ILINet providers was 1.03%, below the regional baseline of 4.20%.
- There were three outbreaks reported in hospitals and two outbreaks reported in nursing homes. Season to date, a total of 867 outbreaks have been reported from hospitals and nursing homes in NYS.
- There were no influenza-associated pediatric deaths reported this week. There have been 19 influenza-associated pediatric deaths reported this season.

## Laboratory-confirmed Influenza Reports and Influenza Hospitalizations (including NYC)

Clinical laboratories report weekly the number of lab-confirmed test results. Hospitals report weekly the number of hospitalized patients with laboratory-confirmed influenza. County, regional, age group, and multi-season comparison graphs are available on the NYS Flu Tracker dashboard at <https://nyshc.health.ny.gov/web/nyapd/new-york-state-flu-tracker>.

<sup>1</sup> Information about influenza monitoring in New York City (NYC) is available from the NYC Department of Health and Mental Hygiene website at: <http://www.nyc.gov/html/doh/>. National influenza surveillance data is available on CDC's FluView website at <http://www.cdc.gov/flu/weekly/>.

<sup>2</sup> **No Activity:** No laboratory-confirmed cases of influenza reported to the NYSDOH. **Sporadic:** Small numbers of lab-confirmed cases of influenza reported.

**Local:** Increased or sustained numbers of lab-confirmed cases of influenza reported in a single region of New York State; sporadic in rest of state. **Regional:** Increased or sustained numbers of lab-confirmed cases of influenza reported in at least two regions but in fewer than 31 of 62 counties. **Widespread:** Increased or sustained numbers of lab-confirmed cases of influenza reported is greater than 31 of the 62 counties. Increased or sustained is defined as 8 or more cases of laboratory-confirmed influenza per 100,000 population.

<sup>3</sup> There is no systemic reporting of negative influenza lab results to the NYSDOH, which may result in an elevated percent positivity.

<sup>4</sup> **ILI** = influenza-like illness, defined as temperature 100° F with cough and/or sore throat in the absence of a known cause other than influenza.

## Regional Incidence for Lab-confirmed Cases and Hospitalizations

Regional incidence rates are calculated for both lab-confirmed cases and hospitalizations.

## Geographic Activity and Incidence Rate

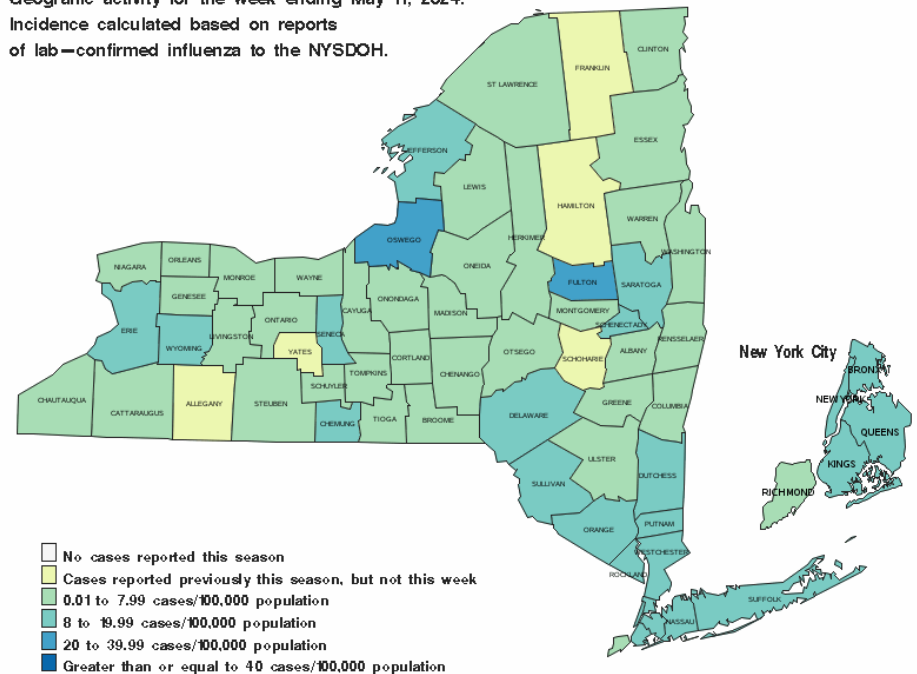

Laboratories that perform testing on NYS residents report all positive influenza test results to NYSDOH. County and regional incidence rates are calculated statewide to determine geographic activity.

- 57 counties reported influenza cases this week.
- Incidence ranged from 0-27.50 cases/100,000 population.

Note: Counties with smaller populations are likely to have an incidence rate greater than 10 cases/100,000 population when fewer (less than 10) lab-confirmed cases have been reported.

NYS Geographic Activity Level This Season			
Total Weeks at Sporadic	Total Weeks at Local	Total Weeks at Regional	Total Weeks at Widespread
5	0	3	24

Geographic activity for the week ending May 11, 2024. Incidence calculated based on reports of lab-confirmed influenza to the NYSDOH.

## National Respiratory & Enteric Virus Surveillance System (NREVSS)

NREVSS surveillance consists of a subset of clinical and public health laboratories in NYS that voluntarily report weekly aggregate data to the CDC for multiple pathogens including influenza, COVID-19, and RSV.

## World Health Organization (WHO) and National Respiratory & Enteric Virus Surveillance System (NREVSS)

The WHO and NREVSS surveillance system consists of a subset of clinical and public health collaborating laboratories that report aggregate data for influenza-positive specimens by type/subtype to CDC.

## Outpatient Influenza-like Illness Surveillance Network (ILINet)

The ILINet Program consists of healthcare providers in NYS (excluding NYC) that voluntarily report aggregate data for the total number of visits and the total number of visits of ILI in an outpatient setting.

## Healthcare-associated Influenza Activity (including NYC)

NYS Hospitals and nursing homes statewide report outbreaks of influenza to NYSDOH. For additional information about the influenza mask regulation and the status of the Commissioner's declaration, please visit [www.health.ny.gov/FluMaskReg](http://www.health.ny.gov/FluMaskReg).
