SUMMARY OF EXPRESS TERMS

A new section for Part 415 of Title 10 (Health) of the Official Compilation of Codes, Rules and Regulations of the State of New York is proposed, to be designated as section 415.41 and entitled “Specialized Programs for Residents with Neurodegenerative Diseases”.

(a) General. For purposes of the proposed regulation, “Neurodegenerative Disease” shall mean Huntington’s disease or Amyotrophic Lateral Sclerosis. “Specialized program” means a discrete unit within a nursing home that offers services and facilities for individuals with Neurodegenerative Diseases, with the goal of helping them attain or maintain the highest practicable level of physical, affective, behavioral and cognitive functioning. The program must be located in a nursing unit which is specifically designated for this purpose and physically separate from other facility units.

The proposed regulation also provides that the facility shall make information and data available to assist the Department of Health (Department) in evaluating the effectiveness of specialty units and their impact on outcomes for individuals with Neurodegenerative Diseases. Such evaluation will be conducted four years after the adoption of the proposed regulation and the Department will consider whether changes are warranted to the programmatic requirements.

(b) Admission. The proposed regulation requires nursing homes to develop written
admission criteria for specialty units for individuals with Neurodegenerative Diseases. At a minimum, the resident’s medical record must document that the resident has a Neurodegenerative Disease diagnosis, cannot appropriately be served and is not safe in a less restrictive setting, and can benefit from the care and services available in a specialty unit. The proposed regulation also provides that the facility shall evaluate the effects of its admission criteria on its success in achieving its goals and objectives for the unit and requires the facility to report its findings to the Department no later than two years after the first admission to the unit and annually thereafter.

(c) Assessment and Care Planning. The proposed regulation requires a home evaluation with the future resident and his or her family prior to admission to discuss care needs. The proposed regulation also requires development of a care plan for each resident, which shall include a discharge plan, by an interdisciplinary resident care team. The care plan must be reviewed and modified at least once a month for the first three months following admission and then quarterly or upon a significant change in the resident’s condition thereafter.

(d) Discharge. The proposed regulation requires that a proposed discharge plan must be developed within 30 days of admission for each resident as part of the overall care plan and shall include input from all professionals caring for the resident, the resident and his or her family, as appropriate, and any outside agency or resource anticipated to be involved with the resident following discharge. The resident must be discharged to a less restrictive setting when he or she no longer meets one or more of the admission criteria
for the unit. Additionally, the proposed regulation provides that a facility shall evaluate
the effects of its discharge criteria on its success in achieving the goals and objectives for
the specialty unit and report its findings to the Department, beginning no later than two
years after the first discharge from the unit and annually thereafter.

Further, nursing homes with specialty units should use best efforts to coordinate with
general hospitals expertise in caring for individuals with Neurodegenerative Diseases. In
the event of a transfer to any general hospital, the facility must require a member of the
specialty unit’s staff to accompany the resident, if feasible, and in any case must
communicate with the hospital and provide any relevant information about the resident at
the time of transfer. The resident shall be given priority readmission status to the unit as
warranted by his or her condition.

(e) Program/Unit Staffing Requirements. The facility must maintain consistent
assignment of direct care staff to residents in the specialty unit. In addition, the proposed
regulation requires that a specialty unit shall be managed by a program coordinator and
that a physician must be responsible for medical direction of the unit. The proposed
regulation also identifies other specific categories of personnel who must be assigned or
available to the specialty unit, including a psychiatrist, a clinical psychologist or licensed
clinical social worker, at least one registered professional nurse on each shift, a
respiratory therapist, and a therapeutic recreation specialist.
(f) Program/Unit Service and Environmental Requirements. The program must include a variety of medical, behavioral, counseling, recreation and exercise, nutrition and other services as appropriate to the needs of each individual resident. Further, the environment shall be customized to both meet the needs and characteristics of residents and minimize injuries to residents and staff. The proposed regulation also provides that residents shall not be prevented from participating in approved clinical trials and permits nursing homes with specialty units to facilitate participation therein.

(g) Program/Unit Training Requirements. The facility must ensure that all staff assigned to the direct care of the residents have pertinent experience or have received training in the care of people with Neurodegenerative Diseases. Training shall be appropriate to the functions and responsibilities of specific staff in the unit, and shall be made available to families, friends and caregivers of residents as appropriate. The facility also must ensure that educational programs are conducted for staff who do not provide direct care but who come in contact with these residents on a regular basis, such as housekeeping and dietary aides.
Pursuant to the authority vested in the Public Health and Health Planning Council and the Commissioner of Health in section 2803(2) of the Public Health Law, Part 415 of Title 10 (Health) of the Official Compilation of Codes, Rules and Regulations of the State of New York, is amended by adding a new section 415.41 to be effective upon publication of a Notice of Adoption in the New York State Register, to read as follows:

415.41 Specialized Programs for Residents with Neurodegenerative Diseases.

(a) General.

1. “Specialized program” shall mean a discrete unit with a planned array of services, staffing, equipment and physical facilities designed to serve individuals with Neurodegenerative Diseases. The program shall provide goal-directed, comprehensive and interdisciplinary services directed at attaining or maintaining the individual at his or her highest practicable level of physical, affective, behavioral, psychosocial and cognitive functioning.

2. For purposes of this section, “Neurodegenerative Disease” shall mean Huntington’s disease or Amyotrophic Lateral Sclerosis.

3. For purposes of this section, and consistent with the requirements of section 415.11 of this Part, the “interdisciplinary resident care team” shall, at a minimum, include the resident’s physician, a registered professional nurse with responsibility for the resident and, depending on the resident’s diagnosis, needs and symptoms, other appropriate staff in disciplines as determined by the resident’s needs, which may include staff assigned to
the unit as set forth in subdivision (e) of this section.

4. The program shall be located in a nursing unit which is specifically designated for this purpose and physically separate from other facility units. Residents of the unit shall have access to the facility’s centralized recreational and therapeutic resources that are not located in the unit.

5. In addition to the implementation of the quality assessment and assurance plan for this program as required by section 415.27 of this Part, the facility shall participate with the department in an evaluation of the efficacy and effectiveness of the program and its impact on resident, family and staff outcomes, to be conducted four years after the adoption of this section.

6. The factors to be reviewed shall include but not be limited to resident, family and staff characteristics and outcomes, including staff, resident and family satisfaction, falls, tailored care planning, injuries (staff and residents), health care and services utilization, including hospitalization and emergency room admissions; nursing home and hospital length of stay; and discharge status. The facility shall collect data and furnish records, reports and data in a format as requested by the department and shall make members of the interdisciplinary resident care team available for participation in the evaluation, as requested by the department. Following completion of such evaluation, the department shall consider whether any revisions to the programmatic requirements for Neurodegenerative Disease specialty units are necessary.
(b) Admission.

1. This provision shall be implemented as a Quality Assessment and Performance Improvement (QAPI) project. The facility shall develop written admission criteria for the specialty unit, to include the criteria in paragraph (2) of this subdivision and take into account the facility’s goals and objectives regarding outcomes (e.g. self-inflicted injuries/falls, chorea-related trauma, hospitalization (length of stay), emergency department utilization, bed hold, and satisfaction surveys of residents with Neurodegenerative Diseases, staff, families, and others) for residents who live in the specialty unit. The facility shall evaluate the effects of its admission criteria on its success in achieving its goals and objectives for the unit and report its findings to the department no later than two years after the effective date of this rule and annually thereafter.

2. At a minimum, for residents admitted to the unit, there shall be documented evidence in the resident’s medical record that:

(i) the resident has been diagnosed with Neurodegenerative Disease as determined by highly suggestive family history, neurological testing, genetic testing when available, formal consultation setting, or formal neurological diagnostic consultation.

(ii) the resident cannot be managed and is not safe and his or her needs cannot be met in an available, less restrictive setting; and

(iii) the resident has the ability to benefit from the specialized care and services available
in the unit.

(c) Assessment and Care Planning.

1. Any assessment of a potential resident must include the admission criteria described in paragraph (2) of this subdivision. Where feasible, one or more members of the staff of the specialty unit shall conduct an evaluation of the home or current residence, living situation (e.g. homeless), or inpatient setting, of the future resident and his/her family prior to admission to discuss care needs. For purposes of this paragraph, “feasible” means the resident’s home or other setting is within reasonable travel distance (in terms of round trip travel time) from either the facility or the home(s) of the staff member(s) conducting the home evaluation. The staff member(s) shall identify preliminary approaches and interventions appropriate for the resident and, based on the results of the evaluation, shall record them in the resident’s care plan prior to admission to the unit.

2. Each resident’s care plan shall include care and services that are therapeutically beneficial to the resident, appropriate to the resident’s interests and selected by the resident or resident’s caregiver as appropriate. The care plan shall be prepared by the interdisciplinary resident care team prior to the resident’s admission to the unit and may require environmental accommodations.

3. Based on the resident’s response to therapeutic interventions, as well as the progression of the disease and its impact on the resident’s functioning, health and psychosocial status, the resident shall be reassessed and the care plan, including the discharge plan, shall be
reviewed and modified at least once a month for the first three months following admission and then quarterly or upon any significant change in the resident’s condition thereafter. The care plan shall be reviewed by at least three members of the interdisciplinary team and shall include at least one certified nurse aide who is assigned to the resident on a permanent basis.

4. Facility or unit staff shall initiate a discussion of advance directives, in accordance with the provisions of section 400.21 of this Subchapter, with the resident or the resident’s family member or other adult, consistent with section 400.21 as soon as practicable following the decision to admit the resident to the unit.

(d) Discharge.

1. This provision shall be implemented as a Quality Assessment and Performance Improvement (QAPI) project. The facility shall develop written discharge criteria for the specialty unit, which at a minimum shall address the provisions of paragraph (5) of this subdivision.

2. The resident and his or her family and/or caregivers shall be notified of discharge criteria upon admission.

3. A written discharge plan shall be developed within 30 days of admission for each resident as part of the overall care plan and shall include input from all professionals caring for the resident, the resident’s family and/or caregivers, as appropriate, and any
outside agency or resource anticipated to be involved with the resident following discharge. The discharge plan shall be reviewed and modified at least once a month for the first three months following admission and then quarterly or upon any significant change in the resident’s condition thereafter.

4. When the interdisciplinary team determines that discharge of a resident to another facility or community-based program is appropriate, a discharge plan shall be implemented which is designed to assist and support the resident, family and caregivers in the transition to the new setting. The resident and his or her family and/or caregivers, as appropriate, shall receive preparation for discharge from the specialty unit through the facility’s educational and counseling services.

5. The resident shall be discharged to a less restrictive setting when he or she no longer meets the minimum admission criteria for the unit set forth in paragraph (2) of subdivision (b) of this section or meets other discharge criteria established pursuant to paragraph (1) of this subdivision.

6. The facility shall evaluate the effects of its discharge criteria on its success in achieving its goals and objectives for the unit and report its findings to the department beginning no later than two years after the effective date of this rule and annually thereafter.

7. (i) The facility shall make best efforts to coordinate with a general hospital or hospitals
that are known to have expertise in caring for individuals with Neurodegenerative Diseases to which residents can be transferred if appropriate.

(ii) In the event a resident of a specialty unit requires transfer to a general hospital:

(a) When feasible, a resident who is transferred to a hospital shall be accompanied by an informed member of the program’s direct care staff to ensure continuity of care. For purposes of this paragraph, “feasible” means that round trip travel time between the facility and the hospital is reasonable.

(b) When it is not feasible for a staff member to accompany the resident to the hospital, unit staff, preferably the resident’s physician or the specialty unit’s medical director, shall communicate with a physician or another health care practitioner at the receiving hospital at the time of the transfer.

(c) In either case, the staff member or physician shall provide to the receiving hospital appropriate documentation and other information that may be needed at the time of transfer to ensure continuity of care.

(d) The resident shall be given priority readmission status to the unit as his or her condition may warrant.

(e) Program/Unit Staffing Requirements.
1. The facility shall maintain consistent assignment of direct care staff to residents who live in the unit.

2. The facility shall ensure that any direct care staff assigned to the unit have been thoroughly trained and educated with regard to the special needs of unit residents, are competent to work in the unit, and are familiar to unit residents.

3. The assignment of direct care staff must be sufficient to enable timely and appropriate care as determined by resident assessment and to protect both resident and staff safety. In addition to the staff assigned to the unit as specified in this subdivision, the facility shall make available other staff as necessary for the provision of care and services set forth in each resident’s care plan.

4. The unit shall be managed by a program coordinator who is a licensed or certified health care professional with previous formal education, training and experience in the administration of a nursing home, preferably with experience in a program that focuses on the care and management of individuals with Neurodegenerative Diseases. The program coordinator shall be dedicated only to the specialty unit. The program coordinator shall be responsible for the operation and oversight of the program. Other responsibilities of the program coordinator shall include:

   (i) planning for and coordination of direct care and services;
(ii) screening prospective admissions;

(iii) developing and implementing in-service and continuing education programs, in collaboration with the interdisciplinary team, for all staff in contact or working with these residents;

(iv) participating in the facility's decisions regarding resident care and services that affect the operation of the unit; and

(v) ensuring the development and implementation of a program plan and policies and procedures specific to this program.

5. A physician who preferably has specialized training in the care of individuals with Neurodegenerative Diseases shall be responsible for the medical direction and medical oversight of this program and shall assist with the development and evaluation of policies and procedures governing the provision of medical services in this unit. If, at the time the physician is appointed as medical director of the unit, he or she does not have experience in providing care to individuals with Neurodegenerative Diseases, he or she shall have access to physicians who do have such experience.

6. A psychiatrist who preferably has clinical experience working with individuals who have Neurodegenerative Diseases shall be available on staff or on a consulting basis (including via telemedicine in conformance with applicable law) to the residents and to the
program.

7. A clinical psychologist or a licensed clinical social worker who preferably has clinical experience working with individuals who have Neurodegenerative Diseases shall be available on staff or on a consulting basis (including via telemedicine in conformance with applicable law) to the residents, staff and family.

8. A social worker who preferably has training and experience in caring for individuals with Neurodegenerative Diseases shall be available either on staff or on a consulting basis (including via telemedicine in conformance with applicable law) to work with the residents, staff and family as needed.

9. There shall be at least one registered professional nurse deployed on each shift in the unit who preferably has training and experience in caring for individuals with Neurodegenerative Diseases. This registered nurse may not be the specialty unit program director required under paragraph (4) of this subdivision.

10. A therapeutic recreation specialist certified by a nationally recognized body acceptable to the department shall be responsible for the therapeutic recreation program.

11. A respiratory therapist shall be available to residents who are no longer able to maintain normal oxygen and carbon dioxide levels.
(f) Program/Unit Service and Environmental Requirements.

1. The program shall consist of a variety of medical, behavioral, counseling, recreational, exercise, nutritional, and other services as appropriate to the needs of each individual resident.

2. Specific services that shall be available to residents who need them include but are not limited to: neurology; pulmonary specialist; psychotherapy; physical, occupational, respiratory and speech therapy; specialized eating and nutritional interventions to maximize independence and prevent unplanned weight loss and dehydration; technology to enable the resident to communicate effectively with family, friends, staff and other residents; and oral care. Consults as needed shall be provided by but are not limited to surgical, podiatry, optometry, ophthalmology, orthopedic, cardiac, gastroenterology; dental and hearing licensed professionals.

3. The therapeutic recreation program shall incorporate the principles of rehabilitation, occupational, physical, and nutritional and speech therapies.

4. Appropriate activities that accommodate individual residents’ interests shall be available at times that accommodate their waking hours.

5. Support groups for residents, families and staff shall be established and facilitated by the social worker or other counseling professional.
6. The environment shall be customized to both meet the needs and characteristics of residents and minimize injuries to residents and staff.

(i) Each resident’s living space shall be customized to safely accommodate his/her specific movement and motor control characteristics and changes in movement and motor control characteristics as the resident’s disease evolves.

(ii) Such customization may include but is not limited to padding around hard surfaces that could harm the resident, staff or visitors; self-protective equipment such as soft helmet, elbow and knee pads; broda chairs (including shower/commode, bariatric, geriatric and glider chairs) with HD special padding if needed; and adequate space to accommodate high amplitude involuntary movements without injury to either the resident, staff or visitors.

(iii) The unit shall include, in their new construction designs, small recreational and dining room areas where residents can be with their families in privacy and comfort.

(iv) Units shall include central bathing and toilet facilities that can accommodate two-person assists. In-room toilets and bathing accommodations should be modified or restricted to ensure resident safety and privacy as described in (i) and (ii).

7. The unit shall be equipped and staff shall be trained as necessary for the provision and management of non-invasive ventilation for residents for whom this service is appropriate.
Supervision shall be provided by a respiratory therapist and pulmonary specialist.

8. Residents shall not be prevented from participating in research projects and clinical trials that have been approved by an Institutional Review Board (IRB) that is registered with the federal Office of Human Research Protection (OHRP) in the United States Department of Health and Human Services and in compliance with the human subjects research requirements at 45 CFR Part 46 as determined by OHRP. To the extent practicable, facilities may facilitate residents’ participation in such research and trials by, for example, becoming trial sites, providing transportation to the trial site, providing assistance to enroll in the research, and working with families to facilitate participation.

9. The facility shall provide outdoor access to residents.

(g) Program/Unit Training Requirements

1. The facility shall ensure that all staff assigned to the direct care of the residents have pertinent experience or have received training in the care and management of people with Neurodegenerative Diseases.

2. Training shall be appropriate to the functions and responsibilities of specific staff in the unit and shall include but not be limited to:

(i) the Neurodegenerative Disease itself, e.g., signs and symptoms, genetics, diagnosis, management, progression/history of the disease, prognosis and epidemiology;
(ii) how each type of staff can contribute to better quality of care and quality of life for resident;

(iii) injury prevention for the resident, staff and visitors;

(iv) creating an organized environment that minimizes stressors, maintains routines and encourages/maximizes independent functioning and decision-making;

(v) ensuring adequate hydration and nutrition; and

(vi) providing and encouraging cognitive stimulation and socialization through passive and active participation in appropriate activities.

3. Families and informal supports, including the resident’s friends and caregivers, shall also have access to this training as appropriate to their activities in the unit.

4. The facility shall ensure that educational programs are conducted for staff who do not provide direct care but who come in contact with the residents on a regular basis such as housekeeping and dietary aides. The educational programs shall familiarize staff with the goals of the specialty unit and the needs of residents with Neurodegenerative Diseases.
REGULATORY IMPACT STATEMENT

Statutory Authority:

Public Health Law (PHL) section 2803(2)(v) provides that the Public Health and Health Planning Council shall adopt rules and regulations, subject to the approval of the Commissioner of Health, governing the standards and procedures followed by nursing homes which, at a minimum, must meet federal standards.

Legislative Objectives:

The legislative objective of PHL Article 28 includes the protection of the health of the residents of the State through the efficient provision and proper utilization of health services of the highest quality at a reasonable cost. The proposed amendments are consistent with this objective through the development of specialty units designed to address the unique needs of individuals with Neurodegenerative Disease and help them maintain or attain the highest practicable level of physical, affective, behavioral and cognitive functioning.

Needs and Benefits:

The purpose of the proposed amendments to 10 NYCRR Part 415 is to provide regulatory standards for nursing home specialty care units for people with Neurodegenerative Diseases. The environmental and care needs for nursing home residents with Neurodegenerative Diseases, at least before the end stages of the disease, often vary from those of other populations in need of nursing home care today. The proposed standards
do not codify clinical pathways and interventions as these may change over time. Rather, they describe the service and environmental needs of people with Neurodegenerative Diseases and the nursing home’s responsibilities to meet the resident’s needs as well as, to a certain extent, their families’ needs.

Four nursing homes have taken steps to create specialty units for people with Neurodegenerative Diseases. Specifically, the following facilities either have already established specialized care units for people with Neurodegenerative Diseases or have submitted Certificate of Need (CON) applications to do so are:

- Terence Cardinal Cooke Health Care Center – an established 48-bed unit in New York City;
- Ferncliff Nursing Home – an established 38-bed unit in Rhinebeck;
- Victoria Home – CON submitted for a 12-bed unit in Ossining; and
- Sitrin Health Care Center – CON submitted for a 32-bed unit in New Hartford

These four facilities will serve as a statewide resource for individuals with Neurodegenerative Diseases, leading to better service for people living in New York and repatriation of out-of-state residents to nursing homes that are closer to their home communities and families. For example, there are currently about 50 Medicaid-eligible New Yorkers with Huntington’s Disease living in out-of-state nursing homes. Many of these New Yorkers would not have had to seek nursing home care outside of New York had there been a nursing home capable of caring for them closer to their home.
communities and families.

**Costs to Regulated Parties:**

Nursing homes are not required to implement the proposed regulation, as the operation of specialty units is voluntary. A nursing home may incur costs associated with the construction of a specialty unit for individuals with Neurodegenerative Diseases. The Department will establish Medicaid reimbursement rates for nursing home providers for delivering appropriate services through the specialty units. A facility is unlikely to apply for approval to operate a specialty unit if it does not expect that doing so will be cost effective.

**Costs to Local Governments:**

Nursing homes are not required to implement the proposed regulation, as the operation of specialty units is voluntary. To the extent a nursing home operated by a local government seeks approval to operate a specialty unit, the costs will be the same as for other regulated parties who operate such units.

**Costs to State Government:**

The proposed rule does not impose any new costs on state government, as regulation of specialty units will be managed as part of the Department’s overall nursing home surveillance activities.
Local Government Mandates:

The proposed amendments do not impose any program, mandate, service, duty or responsibility upon any county, city, town, village, school district, fire district or other special district. Implementation is voluntary.

Paperwork:

Nursing homes interested in operating a specialty unit for individuals with Neurodegenerative Diseases would need to submit and receive approval of a CON application. In addition, nursing homes are already required to maintain compliance with certain reporting, record-keeping obligations and staffing under federal and State requirements. For nursing homes interested in providing specialty care for Neurodegenerative Diseases, which is voluntary, the proposed regulations require additional reporting on admissions, discharges and outcomes and compliance with certain staffing requirements as necessary to meet the objectives of the specialty units. This additional reporting will allow the Department to assess compliance and implementation.

Duplication:

The proposed regulation does not duplicate, overlap or conflict with any other State or federal rules and regulations, but sets forth additional standards for care in specialty units for individuals with Neurodegenerative Diseases.

Alternatives:

“Scatter beds” as opposed to specialty unit beds were considered but rejected. Specialty
units are preferable from a clinical perspective, as they will enable residents to be cared for by an interdisciplinary care team in a customized environment, and likely will be more cost effective in providing residents with the enhanced level of service required.

**Federal Standards:**

The proposed amendments exceed federal standards by setting forth additional standards for care in specialty units for individuals with Neurodegenerative Diseases.

**Compliance Schedule:**

As implementation of the proposed amendments is voluntary, there is no compliance schedule. CON applicants will determine a compliance schedule in conformance with the scope of changes needed in their facilities to accommodate the specialty unit regulatory requirements.

Regulatory Flexibility Analysis for Small Businesses and Local Governments

Effect of Rule:
Implementation of this rule is voluntary, subject to submission and approval of a Certificate of Need (CON) application. It is not known how many small nursing homes (those with less than 100 beds) or how many nursing homes owned and operated by counties and cities will choose to implement the proposed regulation.

Compliance Requirements:
Nursing homes are already required to maintain compliance with certain reporting, record-keeping obligations and staffing under federal and State requirements. For nursing homes interested in providing specialty care for Neurodegenerative Diseases, which is voluntary, the proposed regulations require additional reporting on admissions, discharges and outcomes and compliance with certain staffing requirements as necessary to meet the objectives of the specialty units. This additional reporting will allow the Department to assess compliance and implementation.

Professional Services:
Implementation is voluntary. The professional staff needed to comply with the proposed specialty unit regulations do not vary from the professional staff required to comply with current nursing home rules and regulations, except that the proposed regulation expresses a preference for professional staff with experience in meeting the unique needs of individuals with Neurodegenerative Diseases.
Compliance Costs:

Implementation of the proposed regulation is voluntary, subject to submission and approval of a CON application. A nursing home may incur costs associated with the construction of a specialty unit for individuals with Neurodegenerative Diseases. The Department will establish Medicaid reimbursement rates for nursing home providers for delivering appropriate services through the specialty units. A facility is unlikely to apply for approval to operate a specialty unit if it does not expect that doing so will be cost effective.

Economic and Technological Feasibility:

The proposed regulation is economically and technically feasible. In particular, implementation is voluntary, and a nursing home is unlikely to propose construction and operation of a specialty unit unless it is cost-effective for the facility.

Minimizing Adverse Impact:

As implementation of the proposed rule is voluntary, a nursing home is unlikely to propose construction and operation of a specialty unit unless it is cost-effective for the facility.

Small Business and Local Government Participation:

The Department of Health created a stakeholder advisory group, which helped guide the development of the proposed regulation. The members of this group include representatives of small businesses, specifically nursing homes interested in serving
individuals with Neurodegenerative Diseases, as well as family members and advocates for individuals with Neurodegenerative Diseases and clinical experts with experience caring for such individuals. In addition, a copy of this notice of proposed rulemaking will be posted on the Department’s website. The notice will invite public comments on the proposal and include instructions for anyone interested in submitting comments, including small businesses and local governments.

The proposed regulation provides that the facility shall make information and data available to assist the Department of Health in evaluating the effectiveness of specialty units and their impact on outcomes for individuals with Neurodegenerative Diseases. Such evaluation will be conducted four years after the adoption of the proposed regulations and the Department will consider whether changes are warranted to the programmatic requirements. This period of time is designed to ensure that there is sufficient experience to allow the Department to assess implementation.
Types and Estimated Numbers of Rural Areas:

While there are a number of nursing homes located in rural areas throughout the State, implementation of the proposed rule is voluntary. Nursing homes in rural areas will not be affected differently than those in non-rural areas.

Reporting, Recordkeeping and Other Compliance Requirements and Professional Services:

Nursing homes are already required to maintain compliance with certain reporting, record-keeping obligations and staffing under federal and State requirements. For nursing homes interested in providing specialty care for Neurodegenerative Diseases, which is voluntary, the proposed regulations require additional reporting on admissions, discharges and outcomes and compliance with certain staffing requirements as necessary to meet the objectives of the specialty units. This additional reporting will allow the Department to assess compliance and implementation.

Costs:

Implementation of the proposed rule is voluntary, subject to the submission and approval of a Certificate of Need application. A nursing home may incur costs associated with the construction of a specialty unit for individuals with Neurodegenerative Diseases. The Department will establish Medicaid reimbursement rates for nursing home providers for delivering appropriate services through the specialty units. A facility is unlikely to apply
for approval to operate a specialty unit if it does not expect that doing so will be cost effective.

**Minimizing Adverse Impact:**

As implementation of the proposed rule is voluntary, a nursing home is unlikely to propose construction and operation of a specialty unit unless it is cost-effective for the facility.

**Rural Area Participation:**

The Department of Health created a stakeholder advisory group, which helped guide the development of the proposed regulation. The group’s members are located throughout the state and include family members and advocates for individuals with Neurodegenerative Diseases, clinical experts with experience caring for individuals with Neurodegenerative Diseases, and representatives of nursing homes interested in serving such individuals. In addition, a copy of this notice of proposed rulemaking will be posted on the Department’s website. The notice will invite public comments on the proposal and include instructions for anyone interested in submitting comments, including individuals and entities located in rural areas.

The proposed regulation provides that the facility shall make information and data available to assist the Department of Health in evaluating the effectiveness of specialty units and their impact on outcomes for individuals with Neurodegenerative Diseases. Such evaluation will be conducted four years after the adoption of the proposed
regulations and the Department will consider whether changes are warranted to the programmatic requirements. This period of time is designed to ensure that there is sufficient experience to allow the Department to assess implementation.
STATEMENT IN LIEU OF
JOB IMPACT STATEMENT

No Job Impact Statement is required pursuant to section 201-a(2)(a) of the State Administrative Procedure Act. It is apparent, from the nature of the proposed amendment, that it will not have an adverse impact on jobs and employment opportunities.
