

***Health Homes Serving Children
CANS-NY Algorithms for Determining Health Home Per Member Per Month Fees
And Documentation Guidance***

The attached documents provide information regarding the algorithms applied to the CANS-NY assessments tools (ages 0-5 and ages 6-21) for the purpose of determining the Health Home Per Member, Per Month (PMPM) fee for children under 21 and in a Health Home designated to serve children. The Health Home PMPM for children, i.e., referred to as High, Medium, or Low (HML) Health Home care management acuity is a measure of the level of care management required to serve a child in the Health Home program. Algorithms are provided for High and Medium. Children that do not meet the High or Medium algorithm will be assigned Low Health Home care management acuity.

Health Homes and care management agencies must ensure the care plan and case records for members served include supporting documentation for elements required by the standards for Health Home plans of care, the CANS-NY assessment and the Health Home PMPM care management acuity.

The attached list provides examples of supporting documentation that can be obtained from professionals and providers, including those that assist with completing the CANS-NY. Where providers may not be able provide documentation of a particular situation, then well documented case notes from discussions the care manager has with relevant involved professionals, providers and family members may be acceptable. *Example from the CANS-NY assessment of such a circumstance: The child has a sibling who is experiencing some mild developmental or behavioral problems. It may be that the child has at least one healthy sibling.*
