FACEBOOK: Did you know that during a power outage you need to be careful about using appliances in certain ways that can cause a build up of CO gas? Even low levels of CO can be a concern for the elderly, infants, the unborn, those with anemia, or those with heart or breathing problems.

TWITTER: #DYK? During a power outage, be careful about using appliances in certain ways that can cause a build up of CO gas. Even low levels of CO can be a concern for the elderly, infants, the unborn, those with anemia, or those with heart or breathing problems. https://www.health.ny.gov/publications/7217.pdf

FACEBOOK: Share with a new homeowner or someone you know. Never use:

⚠ A gas range or oven for warmth.
⚠ A charcoal grill or barbecue grill in your home or garage.
⚠ Generators in indoor spaces, carports, or breezeways. Generators should be operated only outside, far away from (25 feet or more, if possible) and downwind of buildings.
⚠ A stove or fireplace unless it is properly installed and vented.
⚠ Gasoline-powered engines, tools, or appliances in enclosed spaces. Carbon monoxide can seep into your home through vents and doors.

**FACEBOOK, TWITTER & INSTAGRAM:** Every year people drive through flooded roads and water. There could be many hidden dangers, including a road that has been swept away. Talk to new and inexperienced drivers about this. #TurnAroundDontDrown

**FACEBOOK:** There are so many reasons why not to drive through flooded roads. Share and name one. Here are four of ours:

⛔ Even the largest and heaviest of vehicles will float. 2 feet of water will carry most cars away.

⛔ As little as 6 inches of water may cause you to lose control of your vehicle.

⛔ Roadbeds may have been washed away.

⛔ Driving too fast through low water will cause the vehicle to hydroplane and lose contact with the road’s surface.
